

Adhesives Tips

It is important to keep your Eversense Smart Transmitter firmly in place over the sensor. Extra support may be needed for sports, during heavy perspiration, or restless sleep. Also, some people might need options for skin irritation due to the adhesive. **The tips below can help to address these concerns. You may need to try different options until you find the one that works best for you.**

General Tips

- Start with clean, dry skin. Remove any lotion or soap prior to placing adhesive patch and smart transmitter.
- Your kit comes with 90 white and 10 clear adhesive patches and you should try both. The white is perforated and may be better at wicking away moisture. The clear is optimal for discretion. Both types are hypoallergenic, use a medical grade non-reactive silicon adhesive, and do not include natural rubber latex.
- If any skin irritation persists, consult with your health care provider for additional treatment options.

The Eversense® Continuous Glucose Monitoring (CGM) System is indicated for continually measuring glucose levels in persons age 18 and older with diabetes for up to 90 days. The system is indicated for use to replace fingerstick blood glucose (BG) measurements for diabetes treatment decisions. Fingerstick BG measurements are still required for calibration twice per day, and when symptoms do not match CGM information or when taking medications of the tetracycline class. The sensor insertion and removal procedures are performed by a health care provider. The Eversense CGM System is a prescription device; patients should talk to their health care provider to learn more.
